

HPC Cloud at SURFsara

— Offering cloud as a service

SURF Research Boot Camp

10th November 2016

Ander Astudillo <ander.astudillo@surfsara.nl>
Markus van Dijk <markus.vandijk@surfsara.nl>

What is cloud computing?

Wikipedia:

“Cloud computing is a jargon term **without** a commonly accepted non-ambiguous scientific or technical definition**”**

(July 2013)

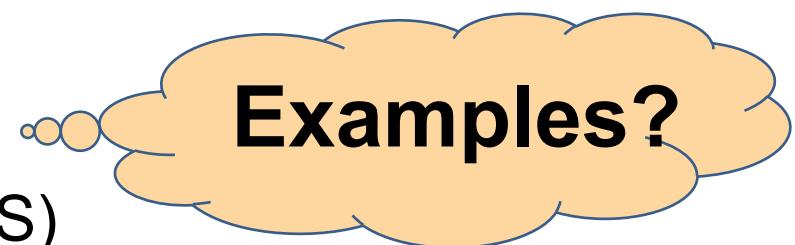

What is cloud computing?

Essential characteristics:

- On-demand self-service
- Broad network access
- Resource pooling
- Rapid elasticity
- Measured service

Service models:

- Software as a Service (SaaS)
- Platform as a Service (PaaS)
- Infrastructure as a Service (IaaS)

Agenda

- 1.- SURFsara's HPC Cloud **service**
- 2.- User experience
- 3.- Calculating π

SURFsara's HPC Cloud service

What do we (SURFsara) want to offer?

Services for **scientists** ...scientists \neq systems gurus

... complex users' problems

- **Data:** big, dirty, non-structured...
- **Computation:** complex (e.g.: modeling, simulation)
- Libraries nightmare
 - 3rd party, incompatibility, maintenance...

Familiar?

... test

... scratch

... trial and error

... share

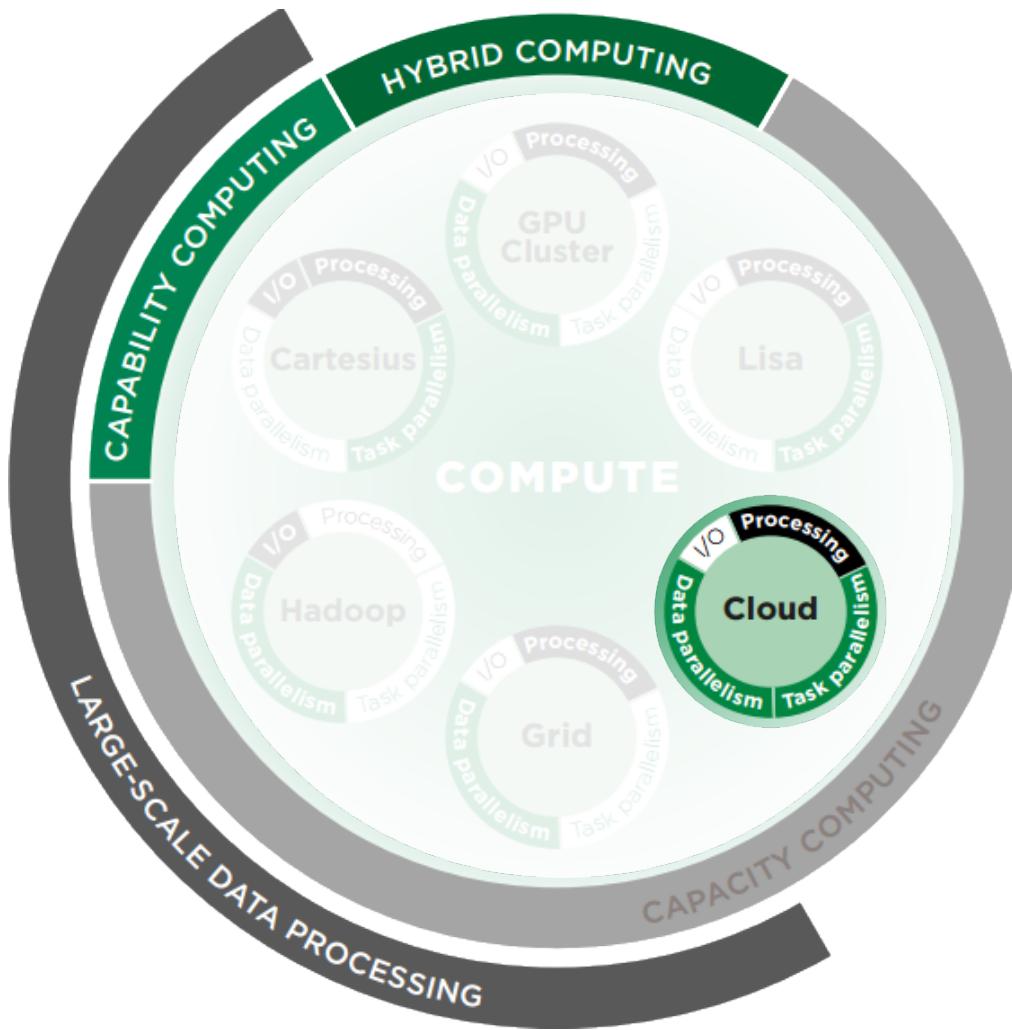

... show

... cooperate

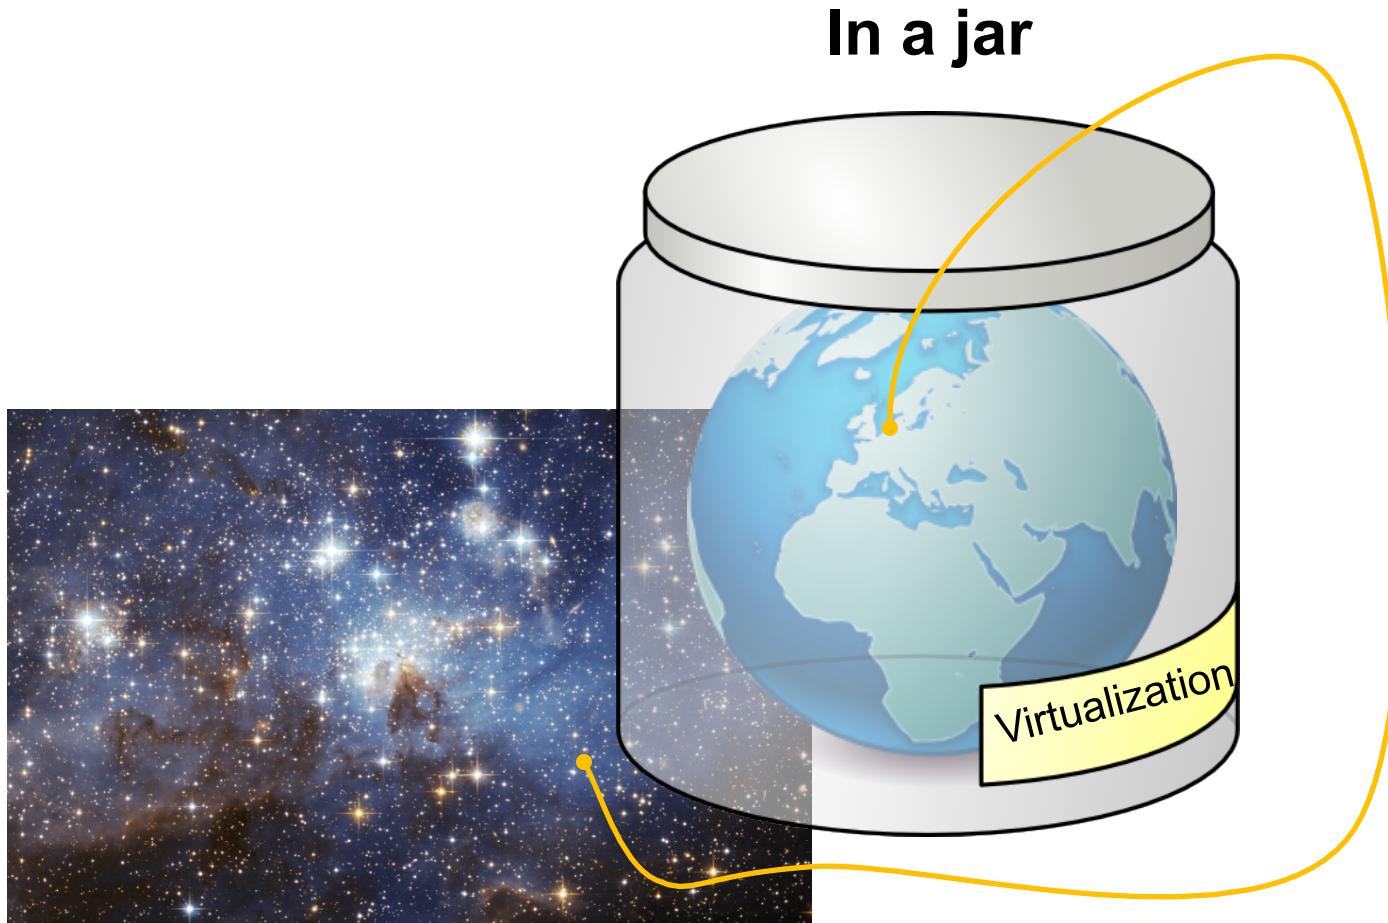

... flexibility

... privacy

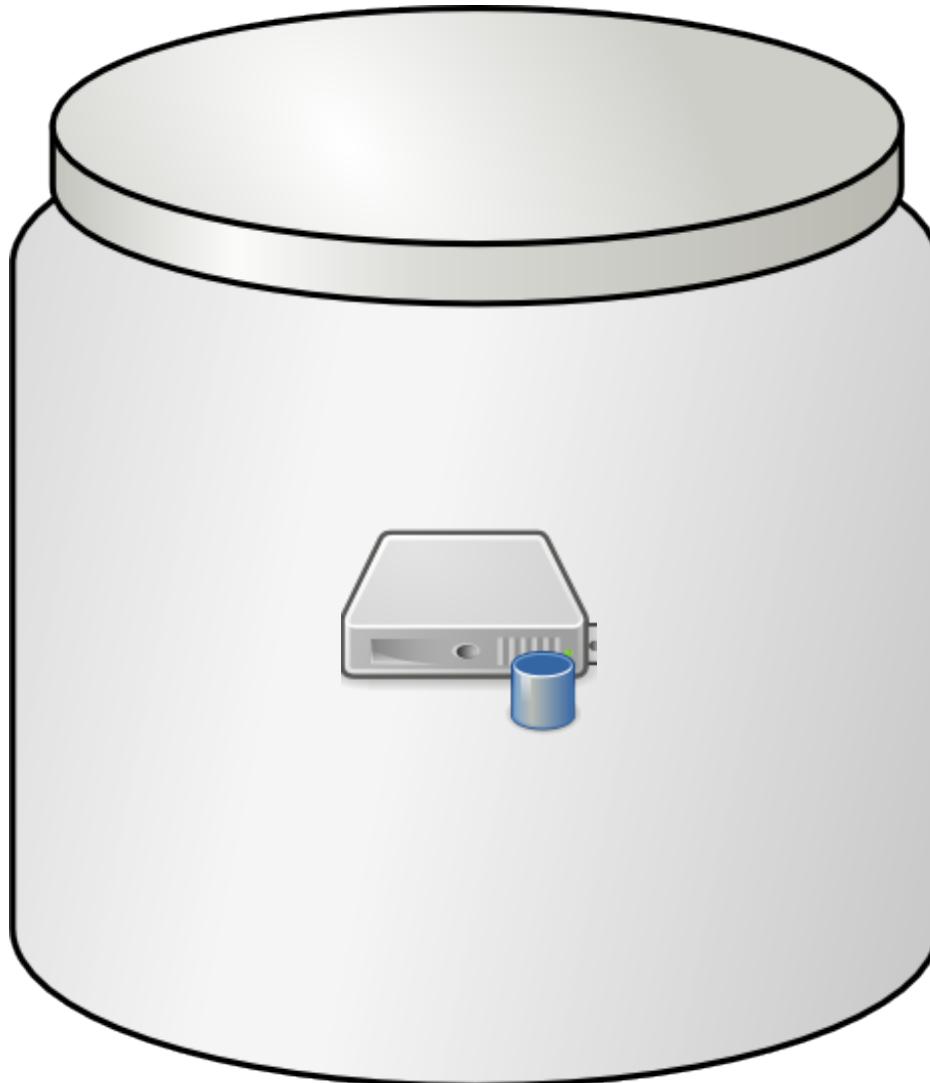

Where does the HPC Cloud fit?

What does our HPC Cloud offer?

What do you see, as a user?

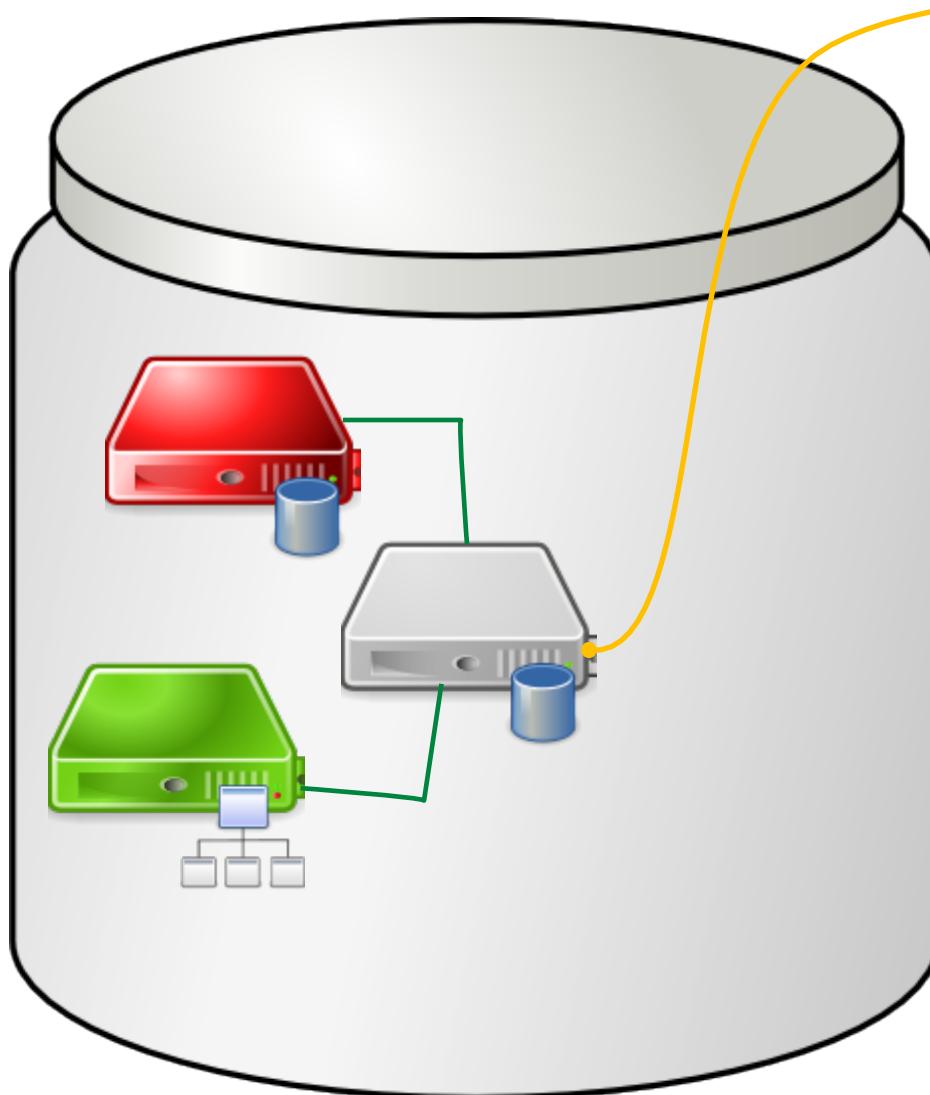

A place to build a running system

Build your own (virtual) machine:

- Hardware
 - CPU
 - Memory
 - Input/Output
 - Disk
 - Network interfaces
- Software
 - Operating System
 - Programs
 - Libraries

What do you see, as a user? (II)

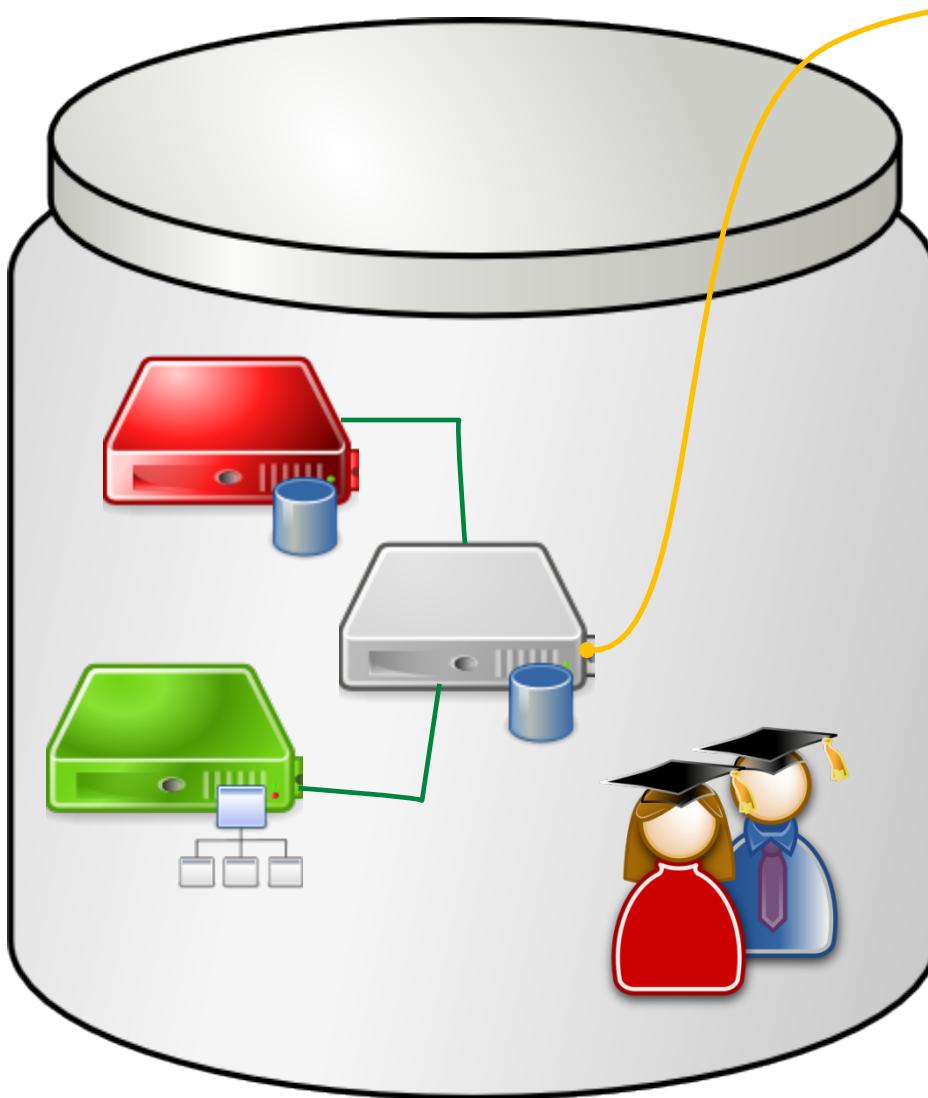

A place to build a bunch of systems

Build your own cluster:

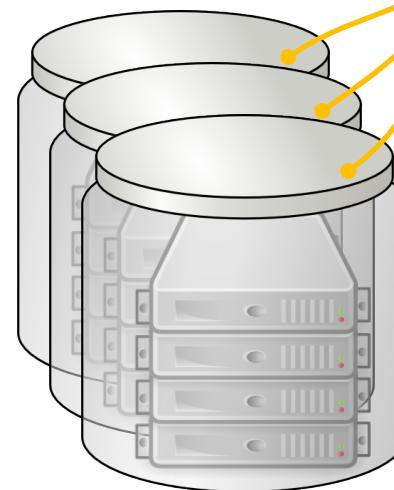

- Private network
- Internet access

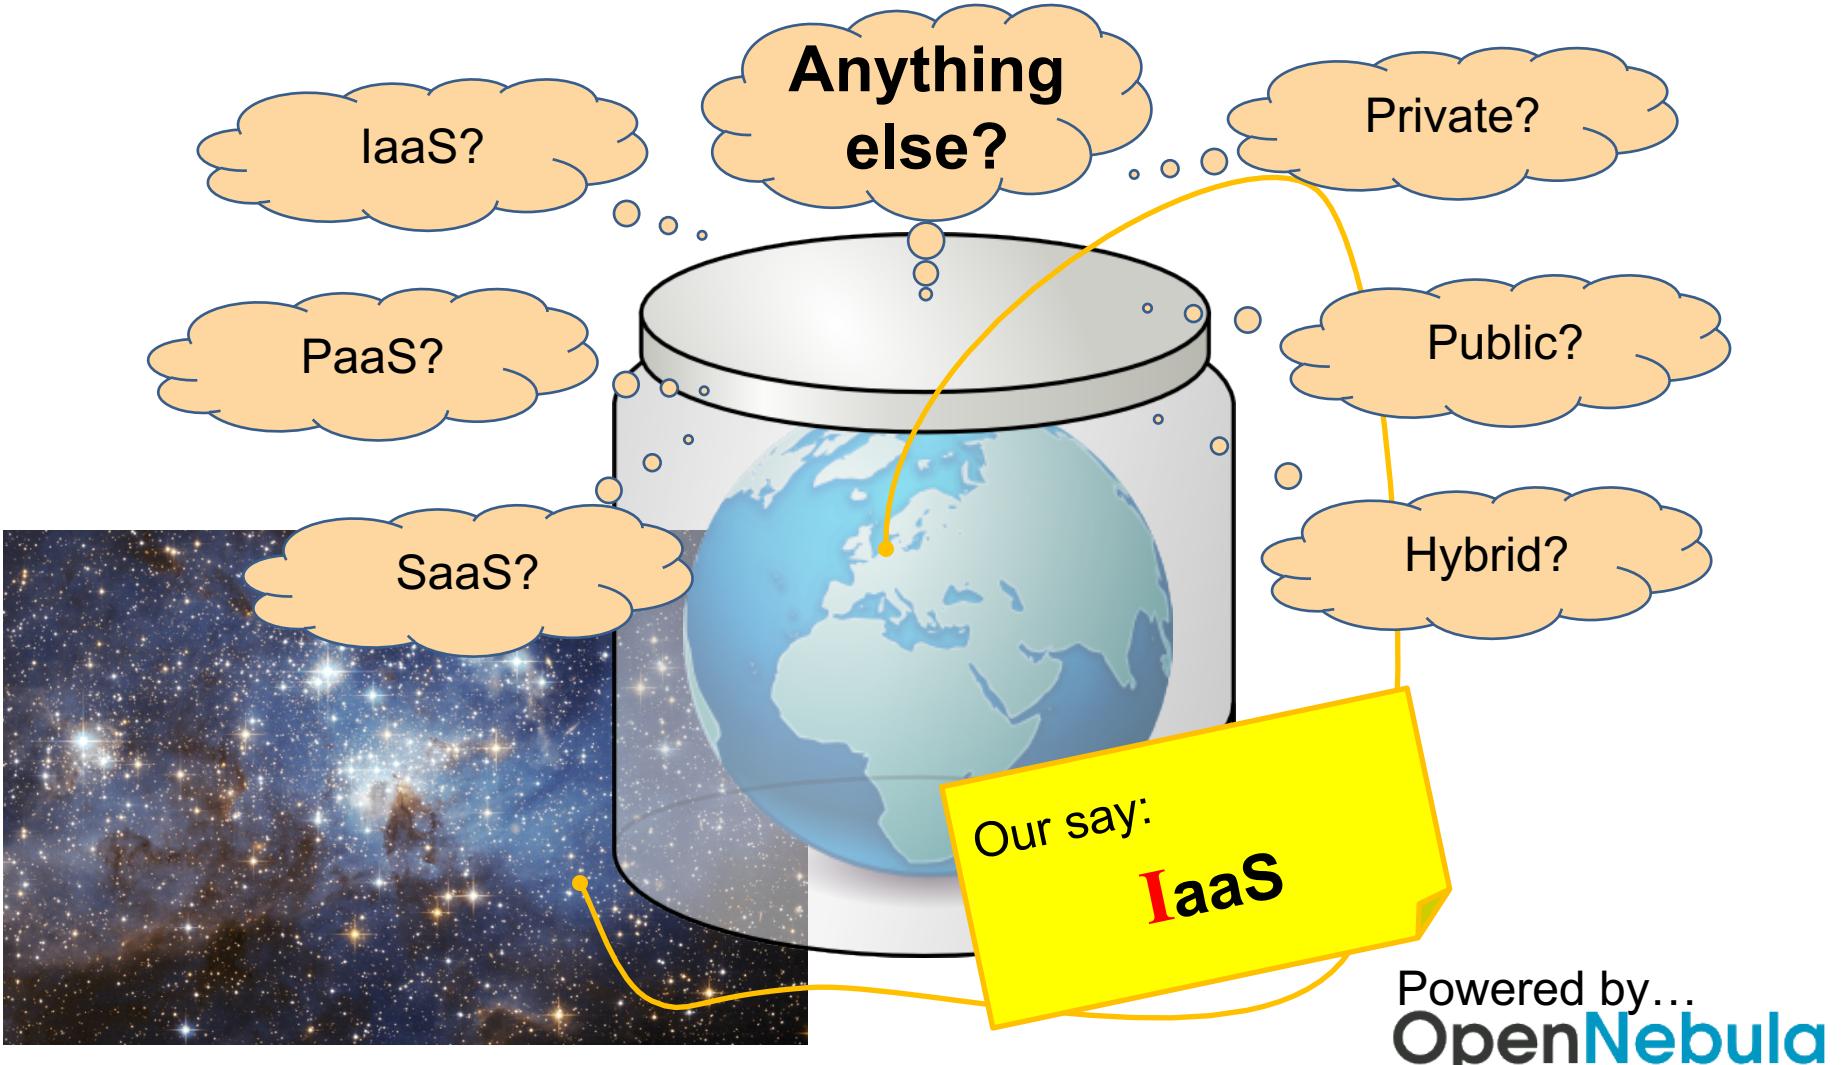

What do you see, as a user? (and III)

A place to
collaborate

Thus...?

User experience

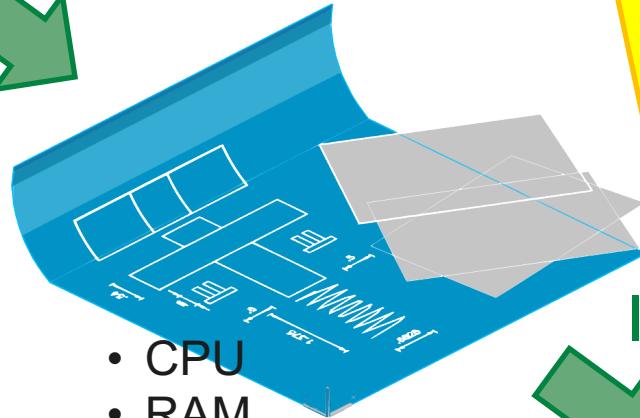

IaaS: Your place to run VMs

- Data store
- Persistence
- ...

Images

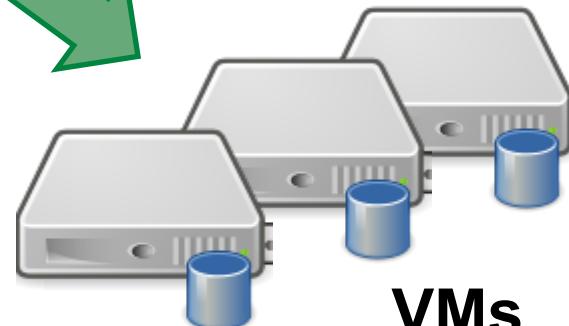

- CPU
- RAM
- I/O
 - Disks
 - Network
- ...

Template

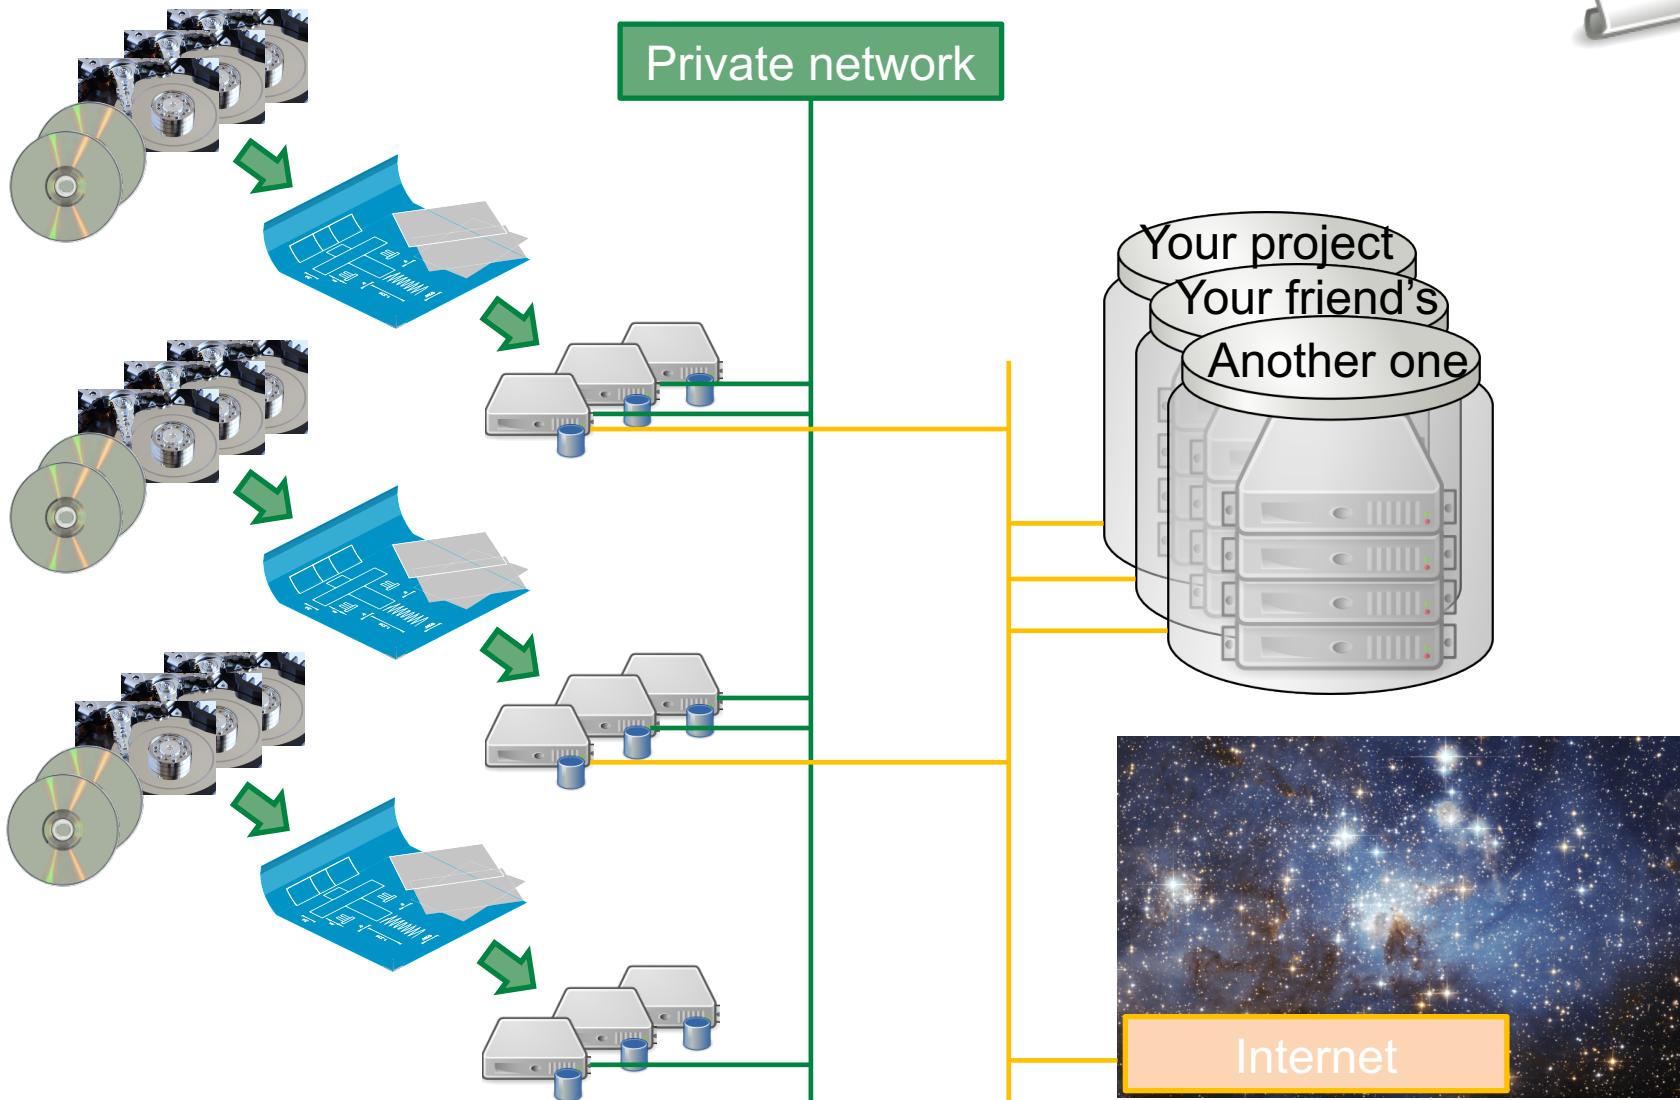

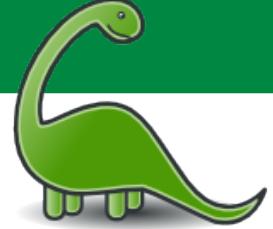

Instantiate

VMs

IaaS: your interconnected VMs

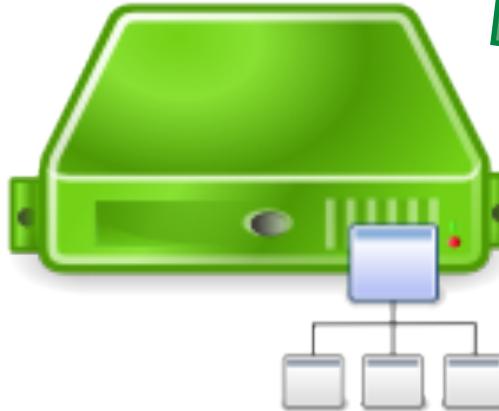

Your application
may need more...

Scale up

vs.

Scale out

You get

HPC

- Many nodes
 - Big nodes
- Fast interconnect
- Plenty of storage
 - Diverse storage
- Large memory

Cloud

- Multi-purpose **versatility**
- Shape **elasticity**
- **Self-service** on-demand

Service

- Project-based
 - Own quotas
 - Private network
 - Block storage
- Dynamic DNS
- Documentation
- Support

OpenNebula

- Web interface
- User groups
- (Custom) AppMarket
- Accounting

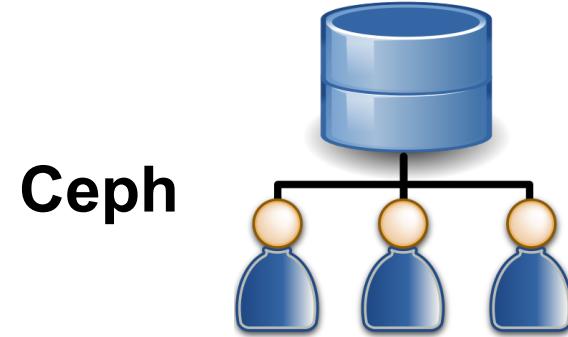

Per project

User accounts

CPU time

Ceph

Local SSD

Users like & leverage...

- Flexible software **mix**
- **Big VMs**
- **Elasticity**
- Provide their own service to **their own users**
- Software that requires **licenses**
- Set up, test and deploy **workflows**
- Deliver training; **courses**
- **Intensive** computing

...from diverse **fields**:

- Biology
- Genetics
- Informatics
- Chemistry
- Ecology
- Linguistics
- Robotics
- Business
- Social sciences
- Engineering
- Humanities
- Water management
- ...

Recently **added** and near **future** features:

Open**Nebula** • Latest release of OpenNebula

Ceph storage; expansion

- Distributed object store and file system
- Cope with increasing load

• **GPU processing**

- Highly parallel structure
- Program specifically to use it

Your first VM

Demo

Practicalities:

Start at: <http://doc.hpccloud.surfsara.nl/bootcamp-20161110>

Work *in pairs*

each with your own credentials on your own laptop

Follow *the instructions at your own pace*

focus on Part A

Call *Markus and Ander*

for: a) doubts; b) when feeling stuck; c) “food for brain” hints

tutorial

SURFsara's HPC Cloud implementation

Appendix

Hardware

1 High-mem node

1x 40-core Intel(R) Xeon(R)
CPU E7- 4850 @ 2.00GHz

2 TB RAM

Ethernet 2x10GE
2.9 TB local SSD disk

32 HPC nodes

11x 64 core Intel(R)
Xeon(R) CPU E5-2640
v3 @ 2.60GHz
256 GB RAM
Ethernet 2x10GE
1.1 TB local SSD disk

21x 64 core Intel(R)
Xeon(R) CPU E5-2698
v3 @ 2.30GHz
256 GB RAM
Ethernet 2x10GE
2.9 TB local SSD disk

12 GPU nodes

12x 32 with HT Intel E5-2640
256 GB RAM
Ethernet 2x10GE
800 GB local SSD disk
4x Nvidia K2 Grid GPU

Network

(Arista DCS-7504)

144 ports **10GE, 1-hop**

Storage

900TB Ceph

& 85.5 TB
local SSD

Network overview
